

Erio Tosatti (Nonantola, Modena, Italy, 1943) is a condensed matter theoretical physicist at the International School for Advanced Studies (SISSA) and at the Abdus Salam International Centre for Theoretical Physics (ICTP). These institutions are based in Trieste, Italy, where he founded research groups in his field and where he contributed to training and raising students from all countries and backgrounds. He has published over 500 papers on many phenomena including optical and dielectric properties of semiconductors, the physics of layered compounds, phase transitions at crystal surfaces, fullerene superconductors, properties of nanosystems, ultra-high pressure physics, quantum annealing, and nanofriction -- the field of his currently running European Research Council (ERC) Advanced Grant. Awarded the 2005 Tate Medal of the American Institute of Physics for his work in favour of developing country scientists, he is also a Fellow of the American Physical Society (2001), a corresponding member of the Accademia Nazionale dei Lincei (2006) and a foreign member of the US National Academy of Sciences (2011).
